

Why Choose Cord Operated Curtain Tracks?

With cord operation all curtains - even heavy, awkward or difficult to reach - can be comfortably and easily handled. Cord operation prevents soiling of curtains by frequent handling. Suitable for domestic and contract applications, our robust systems are maintenance free. The simple combination of high grade nylon with precision engineered aluminium results in the most efficient curtain tracks available. Made to measure. Meant to be bent by design - for bay windows and other curved applications, Silent Gliss corded tracks are unbeatable - they really work!

Silent Gliss Plus

Silent Gliss cord operated tracks are purpose designed for maximum efficiency, especially when bent, and ensure smooth operation for a lifetime.

The design is paramount: cords run in separate enclosed channels so that they cannot fall out or snag - especially important on bends.

Normal or roller gliders can be selected depending on the job to be done.

5 Year guarantee.

The Range

We offer the widest range available worldwide. Select from very discreet profiles up to highly efficient stage tracks capable of runs over 30 metres and carrying curtains over 50kg in weight.

No compromise - choose exactly which one you need. Almost all can be custom-bent.

Choice

Curtain stacking can be to one side or in multiples - left or right, as a pair or multiple pairs or, with certain tracks, asymmetrical - one curtain being wider than the other. Most tracks are available in anodised aluminium or can also be custom painted to your specified colour choice.

Accessories

A comprehensive range of brackets is available to cope with almost all situations.

With heavy and very heavy curtains, smooth operation is guaranteed: gliders or roller gliders can be supplied dependent on curtain weight.

Overlap arms ensure total closure and privacy.
